

## STABILA

### **Reading internal dimensions quickly and clearly**

Portable pocket tape / Viewing window to immediately read internal dimensions /  
Precise measurements / Compact and sturdy

A product's finesse is often found when you look more closely, like with the new BM 150 pocket tape from STABILA, with a metric scale. The special thing about it is its integrated viewing window that allows you to immediately read off internal dimensions. This means that users can precisely measure the dimensions of a window or door opening at a glance. As the viewing window is not divided upside down, the measurements can be read off without making an error.

Furthermore, the BM 150 has all the practical features users would expect from high-quality measurement technology from STABILA. The yellow blade coating makes it easy to read the values off, even in sunlight. The red tens also make it simple to find where you are and read off the values. The start hook can be moved and prevents the tape from slipping, enabling exact measurements. The push brake can be operated using the brake button, which stops and fixes the tape in place. Another practical detail is the metal belt clip, which means that the handy, portable tape measure does not have to be stored in a pocket and can be accessed at all times.

### **Practical, complete protection**

Tools used on building sites have to be 'tough performers'. Thanks to the shock-absorbent ABS housing, the BM 150 tape is resistant to knocks. The paint is also particularly resistant, protecting the scale from mechanical stresses. A buffer on the blade inlet protects the metal, also preventing hook wear when used often. All of these useful features make the new pocket tape a reliable companion over the long term.
